

Concept Overview

Ecco turns museum visits into fun, interactive adventures for families. NFC-enabled cards, linked to specific exhibits, let visitors create personalized stories, solve mysteries, and earn badges for their museum passports. These stories grow with each visit, offering new adventures every time.

An AI-powered companion enhances the experience, turning passive visits into engaging, collaborative journeys. It frees parents from a "teacher" role and captivates children with immersive storytelling. By combining NFC technology and AI, Ecco strengthens family bonds, encourages personalized learning, and helps museums retain visitors.

Scenario of Use

1. Fill in your family information at the digital kiosk, purchase tickets, and receive your family passport.
2. Explore the museum and choose any collection that interests you. Find the cards related to the collection.
3. Insert the cards you like into Ecco to activate your shared story experience.
4. Listen to the interactive story narrated by Ecco, make your choices during the story, and discuss them with your family.
5. Take a picture of the evidence to solve the mysteries related to the story.
5. After completing the story, Ecco will celebrate your success, and you'll earn a special badge as a keepsake.

Key Benefits

Parents visiting museums often look for **engaging** and **educational** experiences that captivate their children while fostering **shared learning**. However, many museum exhibits **lack interactivity and personalization**, leaving families to navigate static displays that can lead to parental fatigue and children's disengagement. Our research highlights a need for more **dynamic, family-oriented** experiences that encourage exploration and meaningful connections with the exhibits.

Ecco addresses these gaps by offering:

Collection

Scalability

Edutainment

Shared Stories

Flexibility

Q&A

Family-centric

Digital Transformation

Concept Functionality

The Ecco device uses **NFC technology**, an **Arduino board**, and a **digital screen** to activate stories and interactive content when an exhibit-linked NFC card is inserted. It enables children and parents to engage together, enhancing exhibit understanding and fostering family bonds through shared interactive learning experiences.

Communication

Digital kiosk communicates with users with promotional video during ticket purchasing in the beginning of the museum journey. Ecco connects to the cloud system to track user progress, provide personalized badges, and regenerate new stories for repeat visits, offering fresh challenges at different levels. At the end of the journey, families receive a badge at the digital kiosk as a tangible memory of their visit.
